## ABOUT THE PROGRAM

The Collaborative Reference Program for RUBBER, which was initiated in 1969, is operated and maintained by Collaborative Testing Services, Inc. (CTS), with technical guidance provided by the Rubber Division of the American Chemical Society. The program allows laboratories to compare periodically the level and uniformity of their testing with that of other participating laboratories. It also provides a realistic assessment of the state of rubber testing proficiency.

For each test there are summary statistics and a graphical representation of the data. Also shown are notes concerning specific laboratory results, as well as significant findings related to instrument types or other testing variations. Please refer to the section KEY TO TABLES AND GRAPHS for an explanation of terms and guidelines to interpreting the results.

## ABOUT CTS

Founded in 1971, CTS is a privately-owned company that specializes in interlaboratory tests for a wide variety of industrial sectors, including rubber, plastics, fasteners and metals, containerboard, paper and color, as well as proficiency tests for forensic laboratories. All of the tests are designed to assist organizations in achieving and maintaining quality control objectives. Labs from the U.S., as well as more than 80 countries, currently participate in CTS programs.

If there are any questions on the report or testing program, please contact:

|                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|---------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>WebCode</b>                        | Assigned laboratory identification number (temporary) used to ensure lab confidentiality while permitting a lab to locate its data in the Rubber Report published on the CTS Web site. The WebCode for each analysis can be found in the Performance Analysis Report mailed to each participant.                                                                                                                                        |
| <b>Lab Mean</b>                       | Tensile & Hardness: the average of the median values obtained for each sample.<br>All other tests: the average of the test results obtained by the participant.                                                                                                                                                                                                                                                                         |
| <b>Grand Mean</b>                     | The average of the LAB MEANS for all included participants. Laboratories flagged with an X or an M (see DATA FLAG column) are excluded from the GRAND MEAN.                                                                                                                                                                                                                                                                             |
| <b>Difference from Grand Mean</b>     | The difference of the LAB MEAN from the GRAND MEAN.                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Between-Lab Standard Deviation</b> | An indication of the precision of measurement between the laboratories. The greater the spread of the LAB MEANS about the GRAND MEAN, the larger the BETWEEN-LAB STANDARD DEVIATION (and vice versa).                                                                                                                                                                                                                                   |
| <b>Comparative Performance Value</b>  | An indication of how well a laboratory's results agree with the other participants. The CPV is a ratio indicating the number of standard deviations from the GRAND MEAN. The closer a laboratory's COMPARATIVE PERFORMANCE VALUE is to zero, the more consistent its results are with the other participants' data (and vice versa). The critical value for each CPV will vary depending on the number of labs participating in a test. |
| <b>Inst Code</b>                      | If instruments are tracked in a test, a code indicating the manufacturer of the instrument used to perform the test (see separate INSTRUMENT CODE LIST for each test section).                                                                                                                                                                                                                                                          |
| <b>Data Flag</b>                      | DATA FLAGS are assigned based on the simultaneous analysis of both samples tested. Refer to the following chart for an explanation of each symbol:                                                                                                                                                                                                                                                                                      |

| <b><u>DATA FLAG</u></b> | <b><u>STATISTICALLY INCLUDED/EXCLUDED</u></b> | <b><u>ACTION REQUIRED</u></b>                                                                                                                                                                                |
|-------------------------|-----------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| *                       | INCLUDED                                      | <b>CAUTION</b> - review testing procedure and monitor future results. Results fall outside 95% ellipse but within a 99% ellipse that is calculated but not drawn.                                            |
| X                       | EXCLUDED                                      | <b>STOP</b> - immediate review of data and/or testing procedure is required. Results fall outside the 99% ellipse. See specific notes following each table for more information on why the data is excluded. |
| M                       | EXCLUDED                                      | <b>PROCEED</b> - lab was unable to report data for at least one sample. However, a lab receiving two of more M flags for a test may need to stop and review its testing procedures.                          |

**Graph** - For each laboratory, the LAB MEAN for the first sample (x-axis) is plotted against the LAB MEAN for the second sample (y-axis) with each point representing a laboratory. The horizontal and vertical cross-hairs are the GRAND MEANS for each sample. When 20 or more laboratories are in the statistics, an ellipse is also drawn so that 95% of the time a randomly selected laboratory will be included inside the ellipse. Plotted data flags are explained above.

---

### Common Problems Highlighted in Footnotes

1. **Extreme data** - The laboratory's results for one or both samples are so inconsistent with those of the other participants that the lab mean(s) fall outside the plot. (The data usually vary by more than three standard deviations from the grand mean.) The participant is advised to immediately review his data and/or testing procedure.
  2. **Systematic bias** - The laboratory's results are either consistently high or low for both samples when compared to the other participants (the plotted point falls near the top or bottom of the ellipse). This indicates that the participant is performing the test with a constant bias. Causes of systematic errors include improper calibration, the particular make/model of equipment or a modification to the testing procedure.
  3. **Inconsistency in testing between samples/sample sets** - The laboratory's results indicate that there are differences in the way the two samples tested (the plotted point falls to the side of the ellipse). This type of error may be attributed to the analyst deviating from the procedure when testing one of the samples or a material interaction occurrence with the instrument or room conditions. The inconsistency is reflected in the CPVs for the two samples, such as a +1.5 CPV for sample A and a -2.2 CPV for sample B. CTS also will specify if the laboratory's data for one sample are high/low compared to the other participants. If this inconsistency is slight, the lab's plotted point will be an \* that falls on the edge of the ellipse.
  4. **Inconsistency in testing within a sample** - The laboratory's within-lab standard deviation for a specified sample is high when compared to the other participants, often causing the lab's plotted point to fall outside of the ellipse.
  5. **Data appeared to be off by a factor of # and was corrected by CTS** - In tests that involve computations, the results reported to CTS may be off by a factor. If this factor can easily be determined, CTS may correct the data and flag the participant. Occasionally CTS will correct a laboratory's results even though the data are still high or low when compared to the other participants. This is done so that the laboratory may be alerted to other possible errors in its testing procedure.
  6. **Data for two samples (or two tests) appeared to be switched by the lab, and the error was corrected by CTS.**
- 

Labs flagged with an \* are not typically included in the footnotes of a data table. These labs may locate their position in the control ellipse and use the definitions above to help identify the type of testing error. An \* should serve as a caution flag, a "yellow light", to a lab. If this error is repeated in future rounds, a lab may need to stop and review its testing procedures. The initial data flag is not cause for alarm. Interlaboratory tests conducted at regular intervals permit a lab to recognize trends in testing.

Samples C41-C42: Polyisoprene compound, batch #1 & C43-C44: Polyisoprene compound, batch #2

### Comments on assigned Data Flags for Test #606

2KZGVR (X) - Extreme data.

D26XZF (X) - Inconsistency in testing between Sample groups. Data for Sample group C43-C44 are high. Inconsistency in testing within Sample group C41-C42.

D27LML (X) - Data for all Samples are high. Possible systematic error. Inconsistency in testing within Sample group C41-C42.

ETTBBC (X) - Inconsistency in testing between Sample groups. Data for Sample group C43-C44 are high.

H9TCQH (X) - Data for all Samples are high. Possible systematic error. Inconsistency in testing within Sample group C43-C44.

L9FYMU (X) - Data for all Samples are high. Possible systematic error.

LCY497 (X) - Data for all Samples are high. Possible systematic error.

UCANKE (X) - Inconsistency in testing between Sample groups. Data for Sample group C41-C42 are low.

WPMMF6 (X) - Inconsistency in testing between Sample groups.

Analysis 606

Ultimate Elongation (percent)

Grand Mean Sample C41-C42 = 621.97 percent

Grand Mean Sample C43-C44 = 616.52 percent

Samples C41-C42: Polyisoprene compound, batch #1 & C43-C44: Polyisoprene compound, batch #2

**Comments on assigned Data Flags for Test #607**

23YJNP (X) - Extreme data.

2KZGVR (X) - Extreme data.

H9TCQH (X) - Data for all Samples are low. Possible systematic error.

L9FYMU (X) - Data for all Samples are low. Possible systematic error.

LCY497 (X) - Data for all Samples are low. Possible systematic error.

UCANKE (X) - Inconsistency in testing between Sample groups. Data for Sample group C41-C42 are high.

VR2N98 (X) - Data appear to be transposed between Analysis #607 and Analysis #608. Data switched by CTS.

Analysis 607

Stress at 300% Elongation (psi)

Grand Mean Sample C41-C42 = 959.69 psi

Grand Mean Sample C43-C44 = 987.61 psi

Samples C41-C42: Polyisoprene compound, batch #1 & C43-C44: Polyisoprene compound, batch #2

**Comments on assigned Data Flags for Test #620**

FUGU6H (X) - Data for all Samples are high. Possible systematic error.

TJTGBT (X) - Inconsistency in testing between Sample groups. Data for Sample group C43-C44 are high.

Y3U7FC (X) - Inconsistency in testing between Sample groups. Data for Sample group C43-C44 are high. Inconsistency in testing within Sample group C41-C42.

Samples C41-C42: Polyisoprene compound, batch #1 & C43-C44: Polyisoprene compound, batch #2

## Analysis 621

Density

---

**Comments on assigned Data Flags for Test #621**

8V23EK (X) - Data for all Samples are low. Possible systematic error.

D9NEDB (X) - Inconsistency in testing between Sample groups. Inconsistent in testing within Sample group C41-C42.

F7FKWH (X) - Extreme data.

GANK8E (X) - Data appear to be off by a factor of 1000. Data corrected by CTS (x.001)

HZF9RV (X) - Inconsistency in testing between Sample groups. Data for Sample group C43-C44 are high. Inconsistency in testing within Sample group C43-C44.

JECMP4 (X) - Data for all Samples are low. Possible systematic error.

PKJBJ8 (X) - Inconsistency in testing between Sample groups. Data for Sample group C43-C44 are high. Inconsistency in testing within Sample group C43-C44.

T83JT3 (X) - Data for all Samples are low. Possible systematic error. Inconsistency in testing within Sample group C43-C44.

YY67NU (X) - Data for all Samples are low. Possible systematic error. Inconsistency in testing within Sample group C41-C42.

Analysis 621

Density

Grand Mean Sample C41-C42 = 1.1356 Mg/M<sup>3</sup>

Grand Mean Sample C43-C44 = 1.1358 Mg/M<sup>3</sup>
